SKILLS

- **Experimental Design:** Planning and implementing psychological studies in controlled settings, with a focus on visual cognition and perceptual processes.
- **Behavioral Data Collection & Analysis:** Running experiments, performing statistical analyses, and interpreting results using Python, R, and MATLAB.
- **Experiment Programming:** Building time-sensitive cognitive tasks with jsPsych and PsychoPy.
- **Non-Invasive Brain Stimulation:** Hands-on experience with tRNS, tACS, and tDCS integrated into experimental protocols.
- **Scientific Communication:** Writing research reports, contributing to manuscript preparation and co-authored publications, and presenting in academic contexts.
- **Intern Supervision:** Training and coordinating successive groups of research interns across multiple semesters of data collection.
- **Team Collaboration:** Working effectively in lab teams and multi-lab international research environments.

- Spanish **B2**

DAVIDE CANTAVENERA

ASSISTANT RESEARCHER IN VISUAL PERCEPTION

I specialize in visual neuroscience and perception. My experience includes designing and conducting behavioral and neuromodulation studies, programming psychophysical tasks, applying non-invasive brain stimulation techniques (tRNS, tACS, tDCS), and performing data analysis with statistical and computational tools, including machine learning and computational modelling.

EXPERIENCE

MARCH 2024 - PRESENT Internship at Department of General Psychology (University of Padua)

This internship focuses on visual neuroscience research within the laboratories of Prof. Gianluca Campana and Prof. Luca Battaglini. My tasks include designing studies, recruiting and coordinating interns, conducting behavioral and neuromodulation experiments (tRNS, tACS, tDCS), and developing experimental scripts (jsPsych, PsychoPy). I participate in the tACS Challenge Project (multi-lab international initiative) and contribute to statistical analysis, computational modelling, and manuscript preparation across concurrent projects.

SEPTEMBER 2024 - NOVEMBER 2024 Internship at R-TREE TECHNOLOGIES S.R.L.

I was trained in prompt evaluation for Large Language Models (LLMs), assessing coherence, contextual accuracy, and overall quality of AI-generated responses. I compared model performance and prepared structured reports on evaluation outcomes.

EDUCATION

2024 - PRESENT

Master's Degree in Applied Cognitive Psychology

This program gives insights on cognitive processes such as attention, memory, perception, language, reasoning, and decision-making, with applications in cognitive enhancement and human-technology interaction. It provides advanced training in psychological assessment, experimental methods, and applied cognitive models, forming the theoretical and methodological foundation for my research in visual neuroscience.

2023 - 2024

Postgraduate Diploma in Data Science & Data Management

This degree provided comprehensive training in statistical modelling, machine learning, AI, data management, big data analytics, and data visualization. It equipped me with quantitative and computational skills that I actively apply in neuroscience research, including experimental data analysis and computational modelling of brain stimulation effects.

2024

Specialization Course in Tutoring for Learning

This course provided theoretical and methodological tools within cognitive psychology, emphasizing key models and their applications to learning processes. I developed skills to apply these models in the domains of memory, attention, and problem-solving, gaining a deeper understanding of how cognitive principles can be translated into practical educational and research contexts.

2020 - 2023

Bachelor's Degree in Cognitive and Psychobiological Psychological Sciences

Completed at the University of Padua. I gained in-depth knowledge of sensory, perceptual, and cognitive processes, including memory, learning, language, intelligence, and psychometrics, as well as the neural foundations of thought and behavior.
